

SIGNICAT SIGN

Signicat Sign offers flexible solutions for electronic signatures and seals. The digital communication as well as exchanging of digital documents is increasing and the need of security likewise. Signicat signature and Signicat seal ensures document origin, integrity and non-repudiation.

Signicat Seal

Large amounts of documents are being exchanged every day and PDF is a commonly preferred format. Using the well-known PDF format ensures that the document can be viewed on almost any platform, and that the document always looks the same. Despite of its wide usage the fact that PDFs are not unchangeable is unknown to many. Documents like contracts, university diplomas, credit and police attestations as well as policy documents, are all examples of documents that are exposed to fraud attacks as they could have potential high value to a fraudster.

Signicat Seal prevents document fraud by sealing the documents. An electronic seal contains the same level of authentication, integrity and non-repudiation as an electronic signature. These characteristics make electronic seals an important component in reducing fraud. The default result format is PAdES (PDF Advanced Electronic Signatures). The main advantages are that the signed document can be viewed using any PDF reader, while the Adobe Reader also verifies that the signature is valid.

What can I use Signicat Seal for?

A seal is an electronic signature added to prevent document fraud and guarantees both document origin and document integrity. Signicat Seal can be used to prove the authenticity of documents and ensure their long-term validation, without any interactions by humans. This means that issuing seals can be automated as the process of verification. This makes it useful for bulk sending of documents as very little effort is needed. Signicat Seal also includes a time-stamp protocol.

Why Signicat?

Signicat handles around 100 million transactions a year and is a trusted party by banks and government institutions. The company has been offering electronic signature to the regulated market for over 10 years and continues to expand its portfolio of signature methods.

SIGNICAT

Signicat is one of the leading providers of electronic identity and electronic signature solutions in Europe. The company, founded in 2007, delivers online trust based services to the public and private sector globally. The solutions are used by banks and financial institutions, insurance companies, government agencies and large corporations as well as small and medium sized businesses.
