

SIGNICAT SIGN

Signicat Sign offers flexible solutions for electronic signatures and seals. The digital communication as well as exchanging of digital documents is increasing and the need of security likewise. Signicat signature and Signicat seal ensures document origin, integrity and non-repudiation.

Signicat Business Signature

As more and more business is conducted online, the need for electronic signatures increases. Electronic signatures speed up the process for both parties and provide an additional layer of security. As opposed to paper-based signatures, electronic signatures ensure document integrity and prevent tampering.

Business Signature offers electronic signing capabilities focused on simplifying signing operations in a business context. B2B signing presents some additional challenges that B2C doesn't, such as the need to bind the signer to the actual company and to verify that the signer has the right to sign on behalf of the company. Furthermore, this solution will address the challenge of forwarding a signature request to the right people with the necessary signing rights, including internal company rules for responsibility.

What are the benefits for the end-user?

Nowadays, many companies spend a lot of time manually managing company contracts that need to be signed. Business Signature provides an efficient way of managing contracts electronically, providing a flexible way of distributing a contract to the people who can sign on behalf of the company.

What are the benefits for the merchant?

Business contracts require a lot of work from the merchant side. Contracts between companies traditionally involve a high degree of manual work, so Business Signature saves time and money. With this solution, the only information a merchant needs is the organization number of the partner company and a contact person's email address. At the end of the process, the merchant will be able to verify that the signing rules have been followed by verifying the signed documents.

The company signing rights will be included in the final contract and secured in the same way as the actual contract text. Even if signing rights change for the company, there will still be evidence for company signing rights at the point that the contract was signed.

Signicat is one of the leading providers of electronic identity and electronic signature solutions in Europe. The company, founded in 2007, delivers online trust based services to the public and private sector globally. The solutions are used by banks and financial institutions, insurance companies, government agencies and large corporations as well as small and medium sized businesses.

Signicat specializes in cross-border cloud based electronic identity services and electronic signatures. The company has local presence in Norway, Sweden, Denmark, Finland, the Netherlands, Germany and the UK. These countries are in the forefront in the world with the usage of digital identities and electronic signatures.
