

SIGNICAT SIGN

Signicat Sign offers flexible solutions for electronic signatures and seals. The digital communication as well as exchanging of digital documents is increasing and the need of security likewise. Signicat signature and Signicat seal ensures document origin, integrity and non-repudiation.

Signicat Forms

As more and more business is conducted online and offers electronic signatures to documents, the need for digital interactive forms increases. Forms provide the end-users with an excellent user experience and is crucial to create a good end-to-end business process.

Signicat offers Signicat Forms, as part of the Sign family, to support the digitization of forms in a seamless way. With Signicat Forms, the document to be signed contains an interactive form that allows the end-user to fill the form fields directly on the screen, without having to download the document. The solution lets customers make their own PDF documents with interactive forms, using for example Adobe Acrobat. No templates are needed and this makes the solution adaptable for a wide range of different businesses with various needs.

Signicat Forms supports text fields, checkboxes, radio button groups and dropdowns. Optionally, the customer can specify initial values for some or all fields and decide whether fields should be set as required or read-only. When the fields are filled out by the end-user the values are merged into the original PDF document and the electronic signing can be completed.

Benefits for the end-user

Signicat Forms will provide the end-user with high fidelity to the original document. It is time saving as the form fill out can be done directly in the document without having to leave the signing process for another editor, or printing the document. As the signature is done in the same process, the filling out and the signing is as low threshold as could be.

Benefits for merchants

The time saving benefit applies to the merchants as well. By creating the form fields directly as a part of the PDF to be signed, the need for standalone HTML forms in addition to the original PDF is redundant. Digital forms also makes better support for reuse, compared to paper-based forms, as well as the form field values are available after signing. For convenience, the filled in form fields are also returned as key-value pairs in the signature status record.

Consent to personal data usage:

I (the undersigned) hereby give Signicat the right to use my personal data.

The following data may be used

- Name
- Date of birth
- Address
- Country only

Validity

The consent is valid
