

SIGNICAT SIGN

Signicat Sign offers flexible solutions for electronic signatures and seals. The digital communication as well as exchanging of digital documents is increasing and the need of security likewise. Signicat signature and Signicat seal ensures document origin, integrity and non-repudiation.

Signicat Signature

As more and more business is conducted online the need for adding electronic signatures to documents increases. Electronic signatures speeds up the process for both parties, and also increases security. As opposed to a paper based signature (wetsign), electronic signatures ensures document integrity and any tampering will be detected.

Signicat Signature offers a flexible solution for adding electronic signatures to text and PDF documents, supporting both multiple documents and signers. Signicat offers different ways to apply an electronic signature. From the simple Signicat InkSign, where the user scribbles the signature on a tablet or mobile device, to strong authentication using any of the eID methods supported. The signed document contains information about the signer, when the signature was added as well as the validity of the signature. All of this information is stored in the document and can be used as legal evidence. The default result format is PAdES (PDF Advanced Electronic Signatures), but XAdES and PDF/A are also supported. The main advantages are that the signed document can be viewed using any PDF reader, while the Adobe Reader also verifies that the signature is valid.

What can I use Signicat Signature for?

Signicat Signature can be used for digitizing business processes by applying electronic signatures on documents such as contracts and loan agreements. The advantage of Signicat Signature is the ability to securely identify the user according to EU-regulations – a key component for providing compliant electronic signatures. Signicat Signature supports multiple documents and multiple signers, providing a responsive sign flow that can be used from any device. Users can identify themselves with over 20 eID methods, which makes the process comfortable for both them and the merchant.

Why Signicat?

Signicat handles around 100 million transactions a year and is a trusted party by banks and government institutions. The company have been offering electronic signature to the regulated market for over 10 years and is continuing to expand its portfolio of signature methods.
